Preface	v	
Tribute to a great thermodynamicist Professor Lucien Borel	vii	
CHAPTER 1	Generalities and fundamental laws	1
1.A	Cooling of a copper piece	1
1.B	Shock of a container against a wall	3
1.C	Work transfer relative to a closed system	6
1.D	Mechanical power of a steam turbine	7
1.E	Water power brake	9
1.F	Irreversibility in a cooled compressor	10
1.G	Irreversibility in a heat transmitter (heat exchanger)	12
1.H	Cooling at constant pressure	14
1.I	Oxidation of glucose	15
1.J	Work and heat transfer relative to a closed system	16
1.K	Car battery	17
1.L	Slowing down of a car	17
1.M	Irreversibility during heating	18
CHAPTER 2	Closed systems and general thermodynamic relations	21
2.A	Polytropic compression	21
2.B	Thermal factors	23
2.C	Polytropic factor	24
2.D	Isochoric specific heat	26
2.E	Entropy change of a gas	27
2.F	Enthalpy and entropy changes of a liquid	29
2.G	Shock of a sphere in freefall	31
2.H	Fundamental relations between state functions	33
2.I	Compression of oxygen according to different paths	35
2.J	Compression of air under different conditions	39
2.K	Filling of a bottle	45
2.L	Expansion without dissipation	46
2.M	Experiment of Torricelli	47
2.N	Relations of Maxwell	48
2.O	Isothermal compression	49
CHAPTER 3	Balances of extensive entities	51
3.A	Water dispenser	51

3.B	Weighing of a receiver with flows	52
3.C	Mixture of two liquid jets	54
3.D	Emptying of a reservoir	56
3.E	Propulsion of a boat	59
3.F	Launch of a rocket	60
3.G	Pipe link	62
3.H	Reaction force on a bent pipeline	63
3.I	Thrust of a turboreactor	65
CHAPTER 4	Open systems in steady-state operation	67
4.A	Stack of a thermal power plant	67
4.B	Central heating plant of a building	70
4.C	Inflating the tube of a tire	74
4.D	Supercharging system of a Diesel engine	77
4.E	Radial compressor	79
4.F	Inlet diffuser of a turboreactor	84
4.G	Pitot tube	86
4.H	Flow in a channel of constant section	88
4.I	Flow in a simple nozzle	90
4.J	Flow in a Laval nozzle	93
4.K	Curtis turbine	95
4.L	Single- or multi-stage compression	101
4.M	Expansion in a turbine	103
4.N	Compression system	106
4.O	Prandtl tube	107
4.P	Dimensioning of a Laval nozzle	108
4.Q	Mass flow measurement with an orifice	109
CHAPTER 5	Thermodynamic properties of matter	111
5.A	State function of a perfect gas	111
5.B	Experiment of Gay-Lussac-Joule	113
5.C	Joule-Thomson expansion	115
5.D	Irreversible expansion of a perfect gas	119
5.E	Reversible expansions of a perfect gas	123
5.F	Work relative to an isothermal expansion	127
5.G	Isochoric heating of water	130
5.H	Equations of state	131
5.I	Fusion by compression	134
5.J	Calorific measurements	136
5.K	Ejector	140
5.L	Joule-Thomson expansion of water (in liquid phase)	147
5.M	Kinetic theory of gases	149
5.N	Earth atmosphere	150
5.O	Equilibrium of a balloon	151
5.P	Isobaric heating and partial vaporisation of water ...	152

5.Q	Isochoric heating and isobaric cooling of a perfect gas.....	154
5.R	Heat of vaporisation	155
CHAPTER 6	Mixture of ideal or perfect gases	157
6.A	Characteristics of a town gas.....	157
6.B	Compression of a mixture of nitrogen and of argon ..	159
6.C	Heating and compression of combustion gas	161
6.D	Mixture of gas flowing in a thermal energy transmitter (heat exchanger).....	163
6.E	Mixture of nitrogen and carbon dioxide, in a hermetic enclosure	165
6.F	Fabrication of synthetic air.....	168
6.G	Expansions and mixing of gases	172
6.H	Change of the concentrations of a mixture of nitrogen and of carbon dioxide	176
6.I	Mixing of air and of methane, in steady-state operation	178
6.J	Characteristics of a mixture of oxygen and nitrogen ..	180
6.K	Characteristics of a gas of a blast furnace	181
6.L	Compression of a mixture of ethane and air	182
6.M	Change of the composition and compression of a mixture of ethane and propane.....	183
6.N	Introduction of nitrogen in a reservoir of hydrogen ..	185
6.O	Conditioning of fumes for drying	186
CHAPTER 7	Mixtures of a gas with a condensable substance	189
7.A	Mixture of two mixtures	189
7.B	Wet cooling tower.....	192
7.C	Humidification of the air of a room.....	195
7.D	Condensation on a wall	198
7.E	Paraisothermal compressor	200
7.F	Drying of a product.....	205
7.G	Air conditioning of an indoor swimming pool	209
7.H	Air conditioning of an office in summer.....	216
7.I	State of the air in a room	222
7.J	Characteristics of atmospheric air	224
7.K	Cooling of air by humidification	225
7.L	Cold room	226
7.M	Air conditioning of an office in winter	227
CHAPTER 8	Thermodynamic processes and diagrams	231
8.A	Adiabatic expansion of an ideal gas	231
8.B	Emptying of a compressed air tank	233
8.C	Feeding a start-up turbine	235
8.D	Expansion of steam in a turbine.....	238

8.E	Phase change of water	241
8.F	Displacement of a piston by expansion of a gas	244
8.G	Processes relative to the expansion of helium	247
8.H	Theoretical cycle of a hot air engine	251
8.I	Theoretical cycle of a Diesel engine	256
8.J	Typical thermodynamic processes	261
8.K	Condensation of a refrigerant	264
8.L	Phase change of carbon dioxide	265
8.M	Production of compressed air	267
8.N	Processes during a cycle	268
CHAPTER 9	Simple examples of application of the First and Second Laws	271
9.A	Process of conversion from mechanical energy to internal energy (experiment of Joule)	271
9.B	Expansion without transfer of mechanical energy (experiment of Gay-Lussac-Joule)	271
9.C	Expansion with transfer of mechanical energy	272
9.D	Energy conversion processes	273
9.E	Evolution of a heterogeneous system	273
9.F	Heat transfer between two bodies	274
CHAPTER 10	Energy and exergy analyses (thermomechanical processes)	275
10.A	Reheater of a nuclear power plant	275
10.B	Cold room of a refrigeration plant	277
10.C	Condenser of a steam power plant	281
10.D	Open and closed feedwater reheaters	284
10.E	High pressure turbine of the power plant of Leibstadt	287
10.F	Paraisothermal compressor of a refrigeration plant	289
10.G	Cooled compressor	293
10.H	Liquid air production plant	296
10.I	Cost of energy relative to a cogeneration plant	303
10.J	Ejector	307
10.K	Expansion without work transfer (Experiment of Gay-Lussac-Joule)	309
10.L	Flow in an orifice	310
10.M	Heat transfer between two parts	310
10.N	Isochoric mixture of two gases	311
10.O	Mixing of several gases, in steady-state conditions	312
10.P	Isochoric heating	313
10.Q	Isobaric heating	314
10.R	Heating under steady-state conditions	315
10.S	Thermal energy storage	316

CHAPTER 11	Combustion	319
	11.A Combustion of a light oil	319
	11.B Incomplete combustion of heavy oil	321
	11.C Combustion of natural gas	327
	11.D Dewpoint of combustion gases	333
	11.E Combustion chamber of a thermal power plant	335
	11.F Industrial steam boiler	339
	11.G Cooling and diffusion of a plume of combustion gas in the atmosphere	347
	11.H Gasoline engine	351
	11.I Incomplete combustion	353
	11.J Turboreactor of a airplane	357
	11.K Liquid fuel for a steam boiler	362
	11.L Bomb calorimeter	363
	11.M Influence of the reference conditions on the heating value	365
	11.N Characteristics of a liquid fuel	366
	11.O Combustion of hexane	367
	11.P Combustion chamber of a gas plant	367
	11.Q Thermal losses of a combustion chamber	368
CHAPTER 12	Examples of application of chapter 10 and 11	371
	12.A Combustion chamber	371
	12.B Steam boiler	372
	12.C Internal combustion engine	376
CHAPTER 13	Thermodynamic cycles	379
	13.A Beau-de-Rochas or Otto cycle	379
	13.B Stirling cycle	383
	13.C Ericsson's pseudo-cycle	386
	13.D Cycle of a hot air engine	388
	13.E Simple Diesel cycle	391
	13.F Brayton cycle	394
	13.G Rankine cycle	400
	13.H Turboreactor cycle	402
	13.I Reversed Brayton cycle	409
	13.J Carnot cycle	412
	13.K Improved Diesel cycle	413
	13.L Statoreactor cycle	415
	13.M Superposed thermopump cycles	418
	13.N Reversed pseudo-Stirling cycle	419
	13.O Reversed pseudo-Ericsson cycle	421
	13.P Comparative study of theoretical power cycles	422
	13.Q Comparative study of theoretical thermopump cycles	424
	13.R Comparative study of theoretical frigopump cycles	426

	13.S Study of theoretical cogeneration cycles	428
CHAPTER 14	Applications: Examples from Chapters 10 to 13	431
	14.A Atmospheric cooling of a condenser	431
	14.B Industrial open cycle gas turbine	435
	14.C Gas-steam combined cycle plant	447
	14.D Closed cycle gas turbine, with two shaft lines	451
	14.E System of compression thermopump (heating heat pump system)	456
	14.F Compression frigopump system (cooling heat-pump system)	462
	14.G Liquid helium production plant	469
	14.H Turbocompression frigopump system	475
	14.I Simple steam power plant	480
	14.J Steam cycle with reheat	481
	14.K Steam power plant, with extraction	481
	14.L Steam power plant, in quasi-steady-state operation ..	482
	14.M Cogeneration steam power plant	483
	14.N Open cycle gas turbine	484
	14.O Thermopump plant with a semi-hermetic compressor	487
	14.P Frigopump system with subcooler	490
CHAPTER 15	Linear thermodynamics of irreversible phenomena	495
	15.A Source of entropy in a bar	495
	15.B Thermocouple	497
	15.C Thermoelectric generator	499
	15.D Thermoelectric module	506
	15.F Thermoelectric thermopump	512
